2152

NOTIFICATION DATE	DELIVERY MODE
-------------------	---------------

07/09/2008

ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

Office Action Summary	Application No. 09/844,856	Applicant(s) GARCIA-LUNA-ACEVES ET AL.	
	Examiner DOHM CHANKONG	Art Unit 2152	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 April 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,3-9 and 11-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 3-9, and 11-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is in response to Applicant's amendment, filed 4.7.2008. Claims 1, 7, and 9, are amended. Claims 1, 3-9, and 11-14 are presented for further examination.
2. This action is a final rejection.

Response to Arguments

3. Applicant's arguments with respect to claims 1, 3-9, and 11-14 have been considered but are moot in view of the new ground(s) of rejection necessitated by Applicant's amendment.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 3-9, 11, 13, and 14 are rejected under 35 U.S.C § 102(e) as being anticipated by McCanne et al, U.S Patent No. 6.785.704 ["McCanne.2"], in view of Partridge et al, "Host Anycasting Service" ["Partridge"], in further view of Grove et al, U.S. Patent No. 6.820.133 ["Grove"].
5. As to claim 1, McCanne.2 discloses a method, comprising:

receiving, at an information object repository, a request for an information object at an address identified by a uniform resource locator (URL) [column 23 «lines 14-17» | column 25 «lines 57-66» where : McCanne.2's cache corresponds to a repository]; and

mapping the URL to a corresponding anycast address for the information object [column 23 «lines 14-17 and 56-60» | column 26 «lines 25-27» where : the cache resolves the URL to an anycast address for the web servers that have the requested content], wherein the information object repository is selected according to specified performance metrics by mapping an address of the client to one or more addresses of the information object repositories using a Web Information Locator by Distance (WILD) protocol that runs on top of a transmission control protocol (TCP) [Figure 18 : McCanne.2's invention running on top of TCP/IP | column 27 «lines 1-13» | also see the response to Applicant's arguments above];

determining whether the anycast address can be resolved into a real unicast address that is uniquely identified for the information object in the Internet [column 20 «lines 21-37»];

resolving the anycast address for the information object to the unicast address for the information object, if the corresponding anycast address can be resolved into the unicast address [column 20 «lines 21-37» | column 21 «lines 9-16» | column 23 «lines 54-67»];

returning a failure if the anycast address cannot be resolved into the unicast address [column 14 «lines 46-54» | McCanne.2 does not explicitly disclose returning a failure but he does disclose relying on DNS. It is well known in the art that if a DNS is unable to resolve addresses, the DNS server will return an error to the requesting client. Thus, one of ordinary skill in the art would have reasonably inferred this functionality into McCanne.2's DNS servers as well]; and

obtaining a copy of the information object at the corresponding unicast address [column 23 «lines 54-67»].

McCanne.2, however, does not expressly disclose (1) the resolving of the anycast address comprising sending an anycast resolution query to the anycast address according to an anycast resolution protocol nor does he disclose (2) mapping an address of the client to one or more addresses of routers that have a best type-of service distance to the address of the client by executing a WILD communication protocol between the routers. However, both features were well known in the art at the time of Applicant's invention.

As to (1), Partridge is directed towards an internet anycasting service for IP [pg. 1, abstract]. Partridge discloses a DNS resolver resolving an anycast address by sending a request (query) to the anycast address [pg. 2, ¶1 : "DNS resolvers...could send a query to a well known DNS anycast address | pg. 3, ¶2 : "...send DNS queries to the DNS anycast address"]. It would have been obvious to one of ordinary skill in the art to incorporate Partridge's anycast address protocol into McCanne's anycast system. Partridge's teachings provide would improve McCanne's system by enabling DNS resolvers to properly resolve anycast addresses by sending queries to anycast addresses.

As to (2), Grove is directed to a method for increasing the performance of network traffic over the Internet [abstract]. To achieve this goal, Grove utilizes a mapping feature that maps an address of a client to an information object repository using anycast [Figure 11 | column 19 «lines 15-37» where : Grove's server's read on the claimed information object repository] as well as mapping the client's address to a router address that has a best type-of service distance to the client's address [column 32 «lines 41-53» where : Grove's c-node reads on the claimed router

since the c-node connects the client to the object repository]. Grove further discloses that his c-nodes execute a protocol between the c-nodes to determine the best distance between the c-nodes and the clients [column 5 «lines 59-62» | column 7 «lines 45-51»]. It would have been obvious to one of ordinary skill in the art to have modified McCanne's anycast system with Grove's mapping features. Grove's features improve on McCanne's system by mapping the client to both the repository as well as the routers within the network which improve the network's performance by selecting the most efficient network path [see Grove, column 7 «lines 45-51»].

6. As to claim 3, McCanne.2 as modified by Partridge and Grove discloses the method of claim 1 further comprising sending the information object to the client [column 23 «lines 14-23 and 54-63»].

7. As to claim 4, McCanne.2 as modified by Partridge and Grove discloses the method of claim 3 wherein the request is received at an information object repository that is topologically closer to the client than any other information object repository [column 13 «line 45»].

8. As to claim 5, McCanne.2 as modified by Partridge and Grove discloses the method of claim 4 wherein the information object repository is selected according to specified performance metrics [column 21 «lines 58-62»].

9. As to claim 6, McCanne.2 as modified by Partridge and Grove discloses the method of claim 5 wherein the performance metrics comprise one or more of: average delay from the

selected information object repository to a source of the request, average processing delay at the selected information object repository, reliability of a path from the selected information object repository, available bandwidth in said path, and loads on the selected information object repository [column 21 «lines 58-62»].

10. As to claim 7, as it does not teach or further define over the previously claimed limitations, it is similarly rejected for at least the same reasons set forth for claim 1.

11. As to claim 8, McCanne.2 as modified by Partridge and Grove discloses the information object repository of claim 8 being further configured to advertise the anycast address using a network layer anycast routing protocol [column 15 «lines 9-14»].

12. Claims 9 and 11 are claims to for a network with elements that perform the steps of the method of claims 1 and 4 respectively. Therefore, claims 9 and 11 are rejected for the same reasons as set forth for claims 1 and 4, *supra*.

13. Claim 13 is a claim for a network with an element that performs the step of the method of claim 5. Therefore, claim 13 is rejected for the same reasons as set forth for claim 5.

14. Claim 14 is a claim for a network with an element that performs the step of the method of claim 6. Therefore, claim 14 is rejected for at least the same reasons set forth for claim 6.

15. Claims 1, 3-9, and 11-14 are rejected under 35 U.S.C § 103(a) as being unpatentable over McCanne et al, U.S Patent No. 6,415,323 [“McCanne”], in view of McCanne.2, in further view of Bhattacharjee, in further view of Grove.

16. As to claims 1, 7, and 9, McCanne discloses a method, comprising:

receiving, at an information object repository, a request for an information object at an address identified by a uniform resource locator (URL) [column 15 <lines 59-60>];

mapping the URL to a corresponding anycast address for the information object [column 15 <lines 59-65>], wherein the information object repository is selected according to specified performance metrics by mapping an address of the client to one or more addresses of the information object repositories using a Web Information Locator by Distance (WILD) protocol that runs on top of a transmission control protocol (TCP) [column 15 «lines 1-6» | column 16 «lines 13-17» | column 17 «lines 45-47» | column 19 «lines 11-13» | see also the response to Applicant’s arguments above];

determining whether the anycast address can be resolved into a real unicast address that is uniquely identified for the information object in the Internet [column 10 «lines 40-43» | column 15 «lines 1-34» | see response to arguments section above];

resolving the anycast address for the information object to a unicast address for the information object, if the corresponding anycast address can be resolved into the unicast address [column 10 <lines 36-43> | column 16 <lines 9-12 and 27-29>]; and

Art Unit: 2152

returning a failure if the anycast address cannot be resolved into the unicast address [column 9 «lines 28-47» where : McCanne does not explicitly disclose returning a failure but he does disclose relying on DNS. It is well known in the art that if a DNS is unable to resolve addresses, the DNS server will return an error to the requesting client. Thus, one of ordinary skill in the art would have reasonably inferred this functionality into McCanne.2's DNS servers as well].

McCanne discloses that the repository is enabled to directly service the client request [column 14 «lines 31-32»] but does not expressly disclose (1) that the repository obtains the information object at the corresponding unicast address. McCanne also does not expressly disclose (2) the resolving of the anycast address comprising sending an anycast resolution query to the anycast address according to an anycast resolution protocol [see rejection of claim 1 under McCanne.2, in view of Bhattacharjee] nor does McCanne expressly disclose (3) mapping the client to a router address that has a best type-of service distance to the address of the client by executing a WILD protocol between the routers [see rejection of claim 1 under McCanne.2, in view of Grove].

As to (1), McCanne.2 is directed towards a content distribution system and specifically moving data streams from content producers to requesters of those streams. McCanne further discloses an information object repository that is enabled to directly obtain a copy of an information object at a corresponding unicast address [column 23 «lines 14-23 and 48-67»]. McCanne.2's cache corresponds to an information object repository, that interprets the URL request for an information object and subsequently retrieves the object from a particular Web server if the object is not currently located in the cache. It would have been obvious to one of

Art Unit: 2152

ordinary skill in the art to modify McCanne with McCanne.2's enhanced repository capabilities. As discussed McCanne does disclose that the repository is capable of directly servicing client requests but was silent as to the functionality of such a capability. McCanne.2 clearly provides a teaching of such functionality that would enable McCanne's repository to directly retrieve requested information objects from a server.

17. As to claim 3, McCanne as modified by McCanne.2, Bhattacharjee, and Grove discloses the method of claim 1 further comprising sending the information object to the client [column 16 <lines 9-12>].

18. As to claim 4, McCanne as modified by McCanne.2, Bhattacharjee, and Grove discloses the method of claim 3 wherein the request is received at an information object repository that is topologically closer to the client than any other information object repository [claim 10 where: the nodes in the anycast group are equivalent to an information object repository].

19. As to claim 5, McCanne as modified by McCanne.2, Bhattacharjee, and Grove discloses the method of claim 4 wherein the information object repository is selected according to specified performance metrics [column 17 <lines 48-58 and claim 8>].

20. As to claim 6, McCanne as modified by McCanne.2, Bhattacharjee, and Grove discloses the method of claim 5 wherein the performance metrics comprise one or more of: average delay from the selected information object repository to a source of the request, average processing

delay at the selected information object repository, reliability of a path from the selected information object repository, available bandwidth in said path, and loads on the selected information object repository [column 17 «lines 48-58» and claim 8].

21. As to claim 7, as it does not teach or further define over the previously claimed limitations, it is similarly rejected for at least the same reasons set forth for claim 1.

22. As to claim 8, McCanne as modified by McCanne.2, Bhattacharjee, and Grove discloses the information object repository of claim 8 being further configured to advertise the anycast address using a network layer anycast routing protocol [column 12 <lines 44-54> and column 20 <lines 40-52>].

23. Claim 9 is a claim to for a network with elements that perform the steps of the method of claim 1. Therefore, claim 9 is rejected for the same reasons as set forth for claim 1, supra.

24. Claim 11 is a claim for a network with an element that performs the step of the method of claim 4. Therefore, claim 11 is rejected for the same reasons as set forth for claim 4, supra.

25. As to claim 12, McCanne as modified by McCanne.2, Bhattacharjee, and Grove discloses the network of claim 11 further comprising a Web router configured to select the information object repository that is closer to the requesting client than any other of the number of information repositories in the network without regard as to whether the information object is

Art Unit: 2152

actually stored at the selected information object repository [column 19 <lines 14-26> and column 20 <lines 55-58>].

26. Claim 13 is a claim for a network with an element that performs the step of the method of claim 5. Therefore, claim 13 is rejected for the same reasons as set forth for claim 5.

27. Claim 14 is a claim for a network with an element that performs the step of the method of claim 6. Therefore, claim 14 is rejected for at least the same reasons set forth for claim 6.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DOHM CHANKONG whose telephone number is (571)272-3942. The examiner can normally be reached on Monday-Friday [8:30 AM to 4:30 PM].

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bunjob Jaroenchonwanit can be reached on 571.272.3913. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
